DECLARATION OF CONFORMITY AND MANUAL RETRIEVAL

KR3 is a panel mounting, Class II instrument. It has been designed with compliance to the European Directives. All information about the controller use can be found in the Engineering Manual: ISTR-MKR3-ENGox ("x" is the revision). The Declaration of Conformity and the manual of the controller can be downloaded (free of charge) from the web-site: www.ascontecnologic.com
Once connected to the web-site, search: **KR3** then click on **KR3**.
In the lower part of the product page (in any language) is present the download area with links to the documents available for the controller (in the available languages).

Warning!

- Whenever a failure or a malfunction of the device may cause dangerous situations for persons, things or animals, please remember that the plant must be equipped with additional devices which will guarantee safety.
- We warrant that the products will be free from defects in material and workmanship for 18 months from the date of delivery. Products and components that are subject to wear due to conditions of use, service life and misuse are not covered by this warranty.

Warning!

All the order codes not present in the tables that follow (Digit **A**: Code **P**, Digit **E**: Code **M**, Digit **F**: Code **M**) are fully described in the "Engineering Manual" that can be freely downloaded from Ascon Tecnologic web site.

MODEL CODE

The Hardware resources are identified by the following Model Code.

Model: KR3 ABCDEFGHI - 0000

Line	KR	3
Optional functions	A	
None	-	
Timer	T	
Power Supply	B	
100... 240Vac (-15... +10%)	H	
24Vac (-25... +12%) or 24Vdc (-15... +25%)	L	
Input	C	
TC, PT100, PT1000, mA, mV, V + Digital Input 1	C	
TC, NTC, PTC, mA, mV, V + Digital Input 1	E	
Output OP1	D	
Relay (1 SPDT, 4 A/250 Vac)	R	
VDC for SSR (12 Vdc/20 mA)	O	
Analogue Output (0/4... 20 mA, 0/2... 10 V)	I	
Output OP2	E	
None	-	
Relay (1 SPDT NO, 2 A/250 Vac)	R	
VDC for SSR VDC for SSR (12 Vdc/20 mA)	O	

Output OP3	F
None	-
Relay (1 SPDT NO, 2 A/250 Vac)	R
Vdc for SSR VDC for SSR (12 Vdc/20 mA)	O
Output OP4	G
Digital I/O (see the Electrical Connections paragraph for details)	D
Serial Communications	H
TTL	-
RS485 Modbus	S
Terminal Type	I
Standard (screw type non removable terminal blocks)	-
With plug-in screw type terminal blocks	E
With plug-in clamp type terminal blocks	M
With plug-in terminal blocks (fixed part only)	N

Model Code example: KR3-HCRRRD--

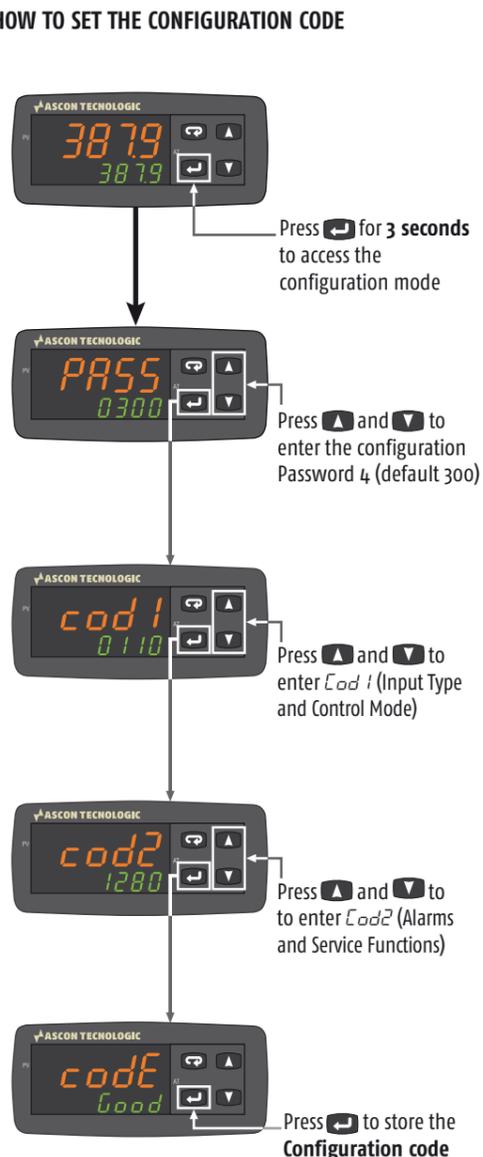

Controller KR3, no timer, 100... 240 Vac, TC/PT100/PT1000/mV/V + Digital Input 1, 3 Relay Outputs, Output 4, TTL, non removable screw type terminals.

CONFIGURATION CODE

The KR3 can be easily configured by the "Code Configuration" method for the most common requirements, just entering two 4-digit codes: **Code 1 [LMNO]** for the Input Type and Control Mode selection and **Code 2 [PQRS]** for the Alarms and the Service Functions. For complete controller configuration see the Engineering Manual.

Note: Before starting the configuration code setting, please define and write down **Code 1** and **Code 2** as needed:

HOW TO SET THE CONFIGURATION CODE

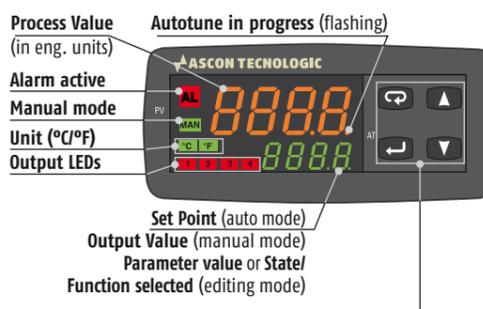

Note: To leave the Configuration session without saving the settings made, press the menu key

DISPLAY AND KEYS

	Operator Mode	Editing Mode
Access to:	- Operator Commands (Timer, Setpoint selection ...) - Parameters - Configuration	Confirm and go to Next parameter
Access to:	- Operator additional information (Output value, running time ...)	Increase the displayed value or select the next element
Access to:	- Set Point	Decrease the displayed value or select the previous element
Start the programmed function (Autotune, Auto/Man, Timer ...)		Exit from Operator commands/Parameter setting/Configuration

DIMENSIONS

Overall dimensions (L x H x D): 78 x 35 x 69.5 mm
(3.07 x 1.37 x 2.73 in.)
Panel Cut-out (L x H): 71+0.6 x 29+0.6 mm
(2.79+0.023 x 1.14+0.023 in.)

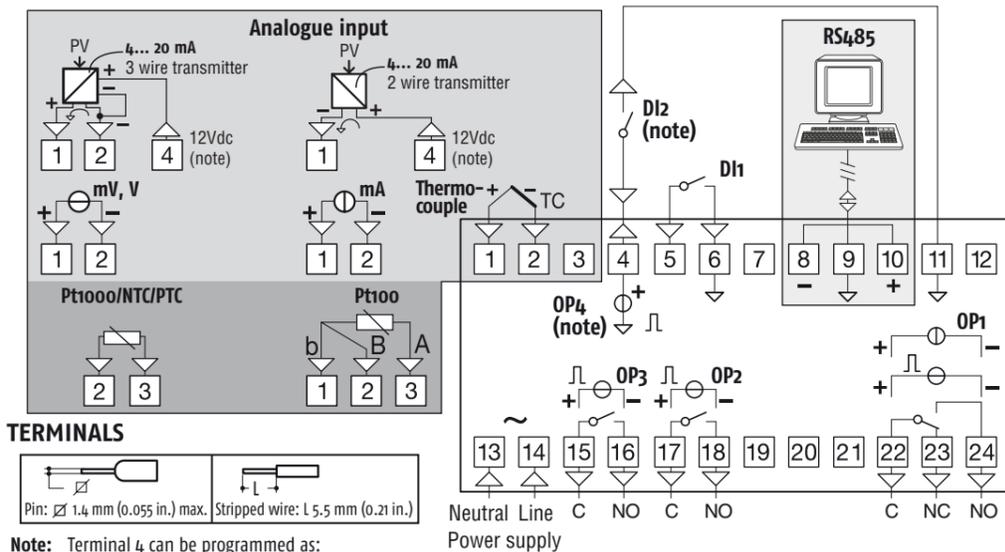

MOUNTING

Attention

The controller can be installed using 2 different types of brackets. Follow the sequence 1, 2a, 3a for the closed version of the bracket, the sequence 1, 2b, 3b for the 2 pieces bracket type.

ELECTRICAL CONNECTIONS

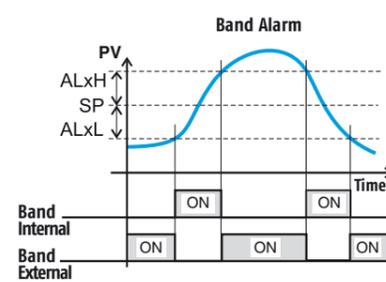

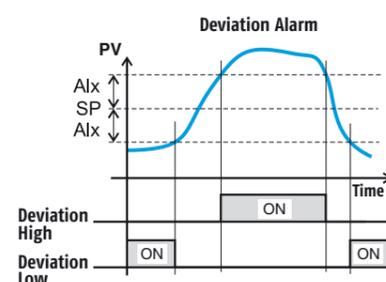

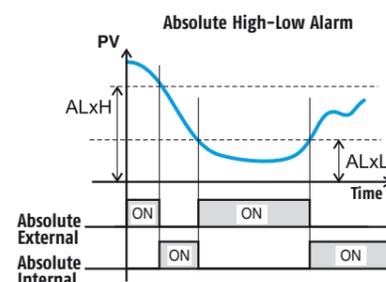

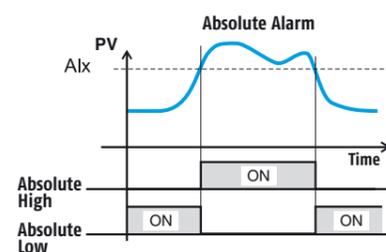

TERMINALS

Note: Terminal 4 can be programmed as:
- **Digital Input (Dl2)** connecting a free of voltage contact between terminals 4 and 11;
- **0... 12 V SSR Drive Output (OP4)** connecting the load between terminals 4 and 11;
- **12 Vdc (20 mA) transmitter power supply** connecting the 2 wire transmitter between terminals 4 and 1; for 3 wire transmitter connect terminal 4 to transmitter power supply input and terminal 1 and 2 to transmitter signal output.

Supply voltage: 100... 240 Vac/
18... 28 Vac/
20... 30 Vdc

ALARM TYPES (Code 2 digits: P, Q, R)

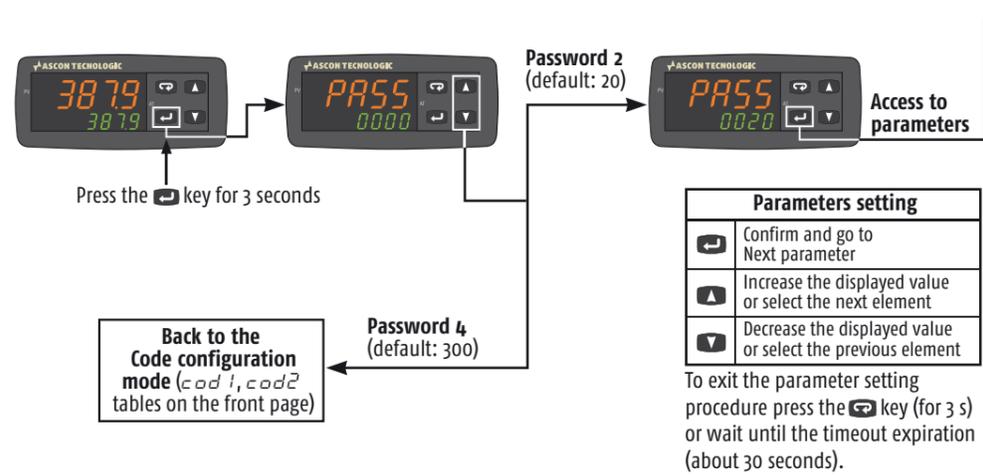

Note: As default, when the alarms are active, only AL1 threshold is available at "Operator Command" level to perform non critical tasks. To protect the AL2 and AL3 thresholds against undesired changes, they are available only at "Parameters list" level (password: 20). For different configurations, see the Engineering Manual.

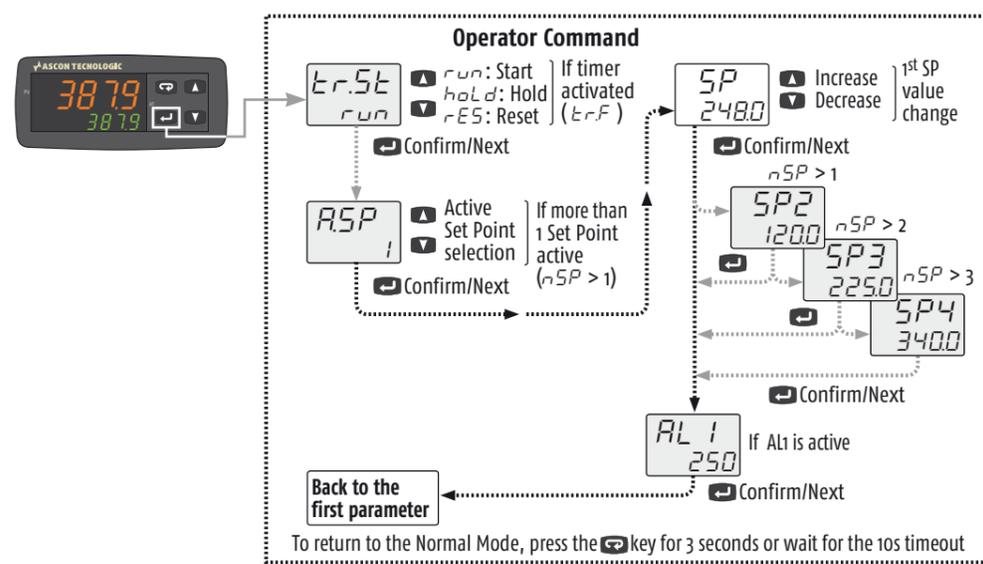

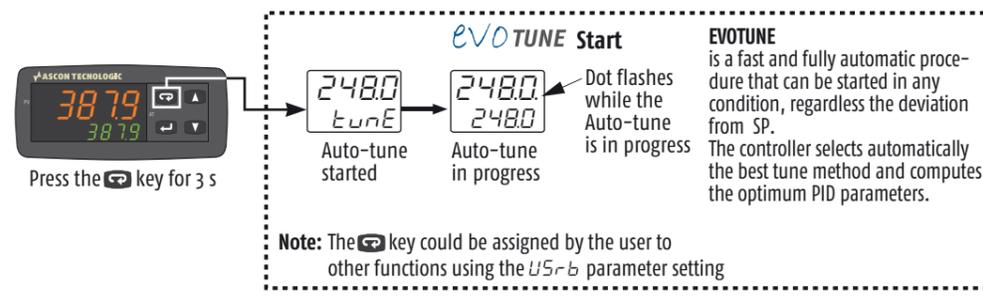

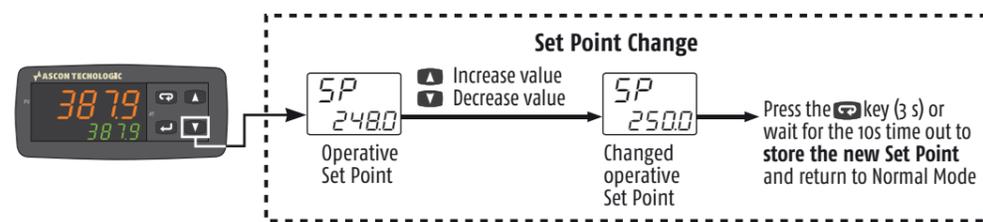

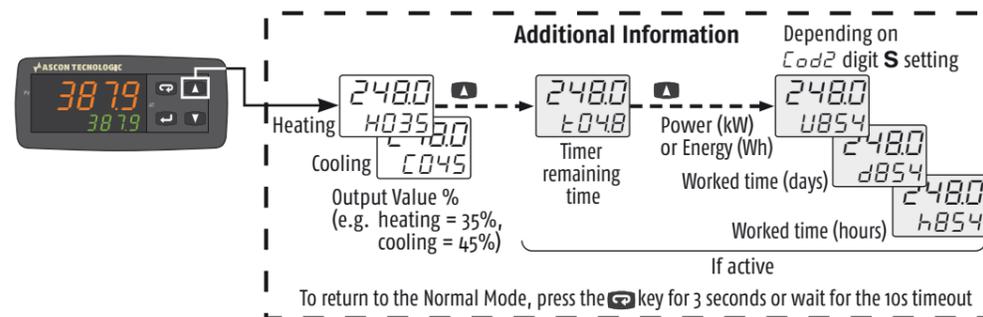

Service functions activation	S
None	0
Wattmeter (instantaneous power expressed in kW) (note 1)	1
Wattmeter (Power consumption expressed in kWh/h) (note 2)	2
Absolute worked time (expressed in days) (note 3)	3
Absolute worked time (expressed in hours) (note 3)	4

Note: 1. **Wattmeter Instantaneous power** is continuously computed as multiplication of the Load Voltage, Load Current parameter values and the controller output instantaneous value.
2. **Wattmeter power consumption** is the estimated hourly energy consumption (using Load Voltage and Load Current parameter values), computed on the previous 15 minutes period. The readout is updated every 15 minutes.
3. **Worked Time counter** is continuously increased when the controller is turned ON.
