

## Model eP4

21/06 - Code: ISTR\_U\_eP4\_E\_02\_--

# User Manual

### Contents

- Characteristics;
- Function Codes used by the module;
- Diagnostics;
- Modbus Address Map organisation;
- Hardware Setup;
- Common parameters;
- Diagnostic information;
- MODBUS Map summary
- Diagnostic LEDs functions and behaviours.

### APPLICABLE STANDARDS

The eP4 module is suited for the Modbus-IDA Organization protocol [1] and implements a subset of it, as explained in the text. Modbus is a registered trademark of Schneider Automation Inc.

## Characteristics

### General

Power supply	24 Vdc (-15...+25%)
Power consumption	12 VA
Dimensions	W x H x D: 108 x 110 x 60 mm (6 DIN module)
Weight:	512 g
Safety regulations	Compliance to EN 61131-2 Isolation class II (50 Vrms), EN61010-1
CE marking	EN61326-1: Electrical equipment for measurement, control and laboratory use. EMC requirements, UL (pending)

### Environment

	Operating	Storage
Temperature	-20... 50°C (-4... 122°F)	-40... 70°C (-40... 158°F)
Relative Humidity	5... 85% non condensing. Appropriate measures must be taken against humidity >85%	5... 95% non condensing. For a short period, slight condensation may appear on the housing
Mounting	Vertical, free air on Omega DIN A rail	
Protection degree	IP20	
Vibrations (3 axes)	10... 57 Hz 0.0375 mm, 57... 150 Hz 0.5 G	
Shock (3 axes)	15 G, 11 ms half sine	

## Communications port

### Serial Communication ports (COM1)

Feature	Description
Isolation	800 V between analogue inputs, analogue outputs, digital IOs, power supply and each other (optional)
Terminal connector	X4

## I/O characteristics

### Digital Channels (D01... D16)

D01... D16 are the Digital I/O that can be configured during offline-setup with the Wizard tool program.

Feature	Description
Type	Configurable as Digital Input (OFF = 0... 3 V, ON = 5... 30 V) or Digital Output (24 Vdc, 0.7 A each)
Isolation	800 V channels/power supply
	800 V channels/logic components
Compliance	IEC/EN 61131-2 (type 1)
Terminal connectors	X6 and X7

### Fast Counter Digital Input (CNT1... CNT2)

Feature	Description
Type	Fast digital pulse count
Isolation	800 V channels/power supply
	800 V channels/logic components
Compliance	IEC/EN 61131-2 (type 1)
Terminal connectors	X6 at terminals CNT1 and CNT2

## Modbus I/O expansion module Model eP4

### 8 AI configurable

- 0/4... 20 mA, 0/1... 5 V, 0/2... 10 V, TC (J, K, L, N, R, S, T), PT100 (2 wires), PT1000, NTC, Potentiometer

### 4 AO configurable

- 0/4... 20 mA, 0/1... 5 V, 0/2... 10 V

### Up to 16 configurable digital I/O

- Digital Input/Output

### 2 Fast count inputs

### 4 Relays/SSR Outputs

### ⚠ WARNING

The product described in this manual should only be installed, operated and maintained by qualified application programmers and software engineers who are familiar with automation safety concepts and applicable national standards.

### Specific Digital Outputs (OP1... OP4)

OP1 to OP4 are designed to be Digital Outputs only: the type can be selected from the ordering code as Relay (code **R**), SSR drive (code **S**) or Mixed (code **M**).

#### OP1... OP4 relay outputs with 2A SPST-NO

Feature	Description
Contact configuration	SPST-NO (Single Pole, Single Throw, Normally Open)
Contact rate	2 A (for resistive loads)
Isolation	3 kV between channel and Power Supply and between channel and main electronics
Output connectors	X2 and X3

#### OP1... OP4 as 0/12 Vdc outputs SSR drive for external SSR

Feature	Description
Power output	10 mA, 12 Vdc
Isolation	None
Output connectors	X2 and X3

### Universal Analogue Inputs (AI1... AI8)

AI1... AI8 are Universal Analogue Inputs that can be configured during offline-setup with the Wizard tool program.

Feature	Description
Type of input	0/4... 20 mA, 0/1... 5 V, 0/2... 10 V, Thermocouple (type J, K, L, N, R, S, T), PT100 (2 wires), PT1000, NTC (Semicite 103AT-2), Potentiometer or 5 V Ratiometric
Resolution	16 bit
Accuracy	0.1 % of span (linear inputs)/0.2% (Temperature)
Input impedance	120 kΩ (V), < 200 Ω (mA)
Isolation	800 V between analogue outputs, power supply, digital I/Os and communication ports (when isolated)
Input connectors	X8 and X9

### Analogue Output (AO1... AO4)

AO1... AO4 are the Analogue Outputs that can be configured during offline-setup with the Wizard tool program.

Feature	Description
Type of Output	0/1... 5 V, 0/2... 10 V, 0/4... 20 mA
Load	< 500 Ω (mA), > 1 kΩ (V)
Resolution	12 bit
Accuracy	0.1% full scale
Isolation	800 V between analogue outputs, power supply, digital I/Os and communication ports (when isolated)
Connector	X11 and X12

### Function Codes used by the module

			Functions (hex)
Data access	Bit access	Internal Bits or Physical Digital output	Read Coil status 01 01
			Write Multiple Coils 15 0F
	Word access	Physical Input Registers	Read Input Register 04 04
		Internal Registers or Physical Output Registers	Read Holding Registers 03 03
			Write Multiple Registers 16 10

The function codes provided for all the modules are a subset of the "Public Function Codes", validated by the Modbus-IDA Organization.

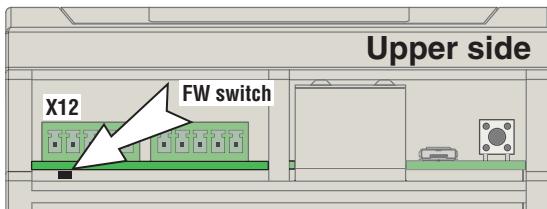

Function 01 can be used to read both digital outputs and digital inputs.

Function 03, Function 04 can be used to read both output and input registers.

## Firmware Update

The eP4 Firmware Update can be made only through the USB <-> PC connection.

1. Power OFF the unit;
  2. Press the small **FW button** located under the **X12** terminal block;
  3. **Keep pressed the FW button and power ON** the unit: the **PWR** LED only should be **steady ON**;
  4. Plug in the micro **USB** cable type into the unit: on the PC the unit will be recognized as a **MASS STORAGE** device (**AT\_EP4**);
- ⚠ Make sure that the USB cable IS NOT PLUGGED to the device BEFORE it is powered ON!**
5. Navigate to the **AT\_EP4** folder and **delete** the **fwup.hex** file from the folder;
  6. **Copy** now the specific new firmware file (**fwdown.hex**) into the same folder;
  7. Wait until the copy operation is completed (about 5 seconds);
  8. Power OFF the unit and unplug the USB cable;
  9. Power ON the unit and wait until the **PWR** and **RUN** LEDs will be **steady ON** for normal operations.

## Diagnostics

### Modbus Exception Responses

Code	Name	Meaning
01	ILLEGAL FUNCTION	The function code received in the query is not an allowable action for the server (or slave)
02	ILLEGAL DATA ADDRESS	The data address received in the query is not an allowable address for the server (or slave).
03	ILLEGAL DATA VALUE	A value contained in the query data field is not an allowable value for server (or slave).

## Modbus Address Map organisation

### Writing and reading data length limits:

Number of Digital Outputs to be written in a single message	max. 32;
Number of Digital I/O to be read in a single message	max. 32;
Number of Output Registers to be written in a single message	max. 40;
Number of I/O Registers to be read in a single message	max. 40.

## Hardware Setup

The RS485 communications port could be configured to adapt to different needs. In order to change the default communication parameters, the user should:

1. By using the Wizard tool, prepare the desired hardware configuration;
2. Export it as **sys\_conf.bin** on an USB key in a folder called **cfg\_sys**;
3. Insert the USB memory key in the eP4 module and power it;
4. Wait until the white LED starts blinking and press the System Push Button at least for 1 second;
5. Once the Upgrade Procedure is finished (the PWR, RUN and USB LEDs become steady light), perform a Modbus COM reset command or a Power cycle in order to make the new parameters active.

The communications parameters are:

Modbus address	Name	Type	Command	Access
4000	COMM_COMMANDS	WORD	Cumulative com.s commands	R/W
4000.0	COMM_RESET	BOOL	Communication ports reset	R/W
4001	NODE_ADDR	USINT	Expansion node address	R/W
4002	BAUD_RATE	USINT	Expansion baudrate	R/W
4003	DATA_LENGTH	USINT	Expansion data lenght	R/W
4004	DATA_PARITY	USINT	Expansion data parity	R/W
4005	STOP_BITS	USINT	Expansion data stop bits	R/W
4006	COMM_TOUT	UINT	Expansion com.s timeout x100 ms	R/W

The Communications parameter settings are:

Parameter	Values (default value)
NODE_ADDR	1... 247 (default value: 201).
BAUD_RATE	0 2.4 kbps; 1 4.8 kbps; 2 9.6 kbps; 3 19.2 kbps; 4 38.4 kbps (default value); 5 57.6 kbps.
DATA_LENGTH	7/8 (default value: 8).
DATA_PARITY	0 None (default value); 1 Even; 2 Odd.
STOP_BITS	1/2 (default value: 1).
COMM_TOUT	0... 65535 (default value: 50).

## Common parameters

### Universal analogue input status

Modbus address	Name	Status values	Access
0120	Ch. 01 Universal Analogue Input Status	0 Signal OK; 1 Underrange; 2 Overrange;	R
...	...	4 Not configured; 8 Invalid measure.	R
0127	Ch. 08 Universal Analogue Input Status	0 Signal OK; 1 Underrange; 2 Overrange;	R

### Universal analogue output status

Modbus address	Name	Status values	Access
0128	Ch. 01 Universal Analogue Output Status	0 Signal OK; 1 Underrange;	R/W
...	...	2 Overrange; 4 Not configured;	R/W
0131	Ch. 04 Universal Analogue Output Status	8 Invalid measure.	R/W

### Input Type Configuration

Modbus address	Name	Status values	Access
0004	Ch. 01 Universal Analogue Input Config	See the "Input Type Table"	R
...	...	...	R
0011	Ch. 08 Universal Analogue Input Config	...	R

### Input Type Table

Value	Unit	Description	Range
0	V	0... 5 Volt	0.0.. 5.5 V
1	V	1... 5 Volt	0.6.. 5.4 V
2	V	0... 10 Volt	0.0.. 11.0 V
3	V	2... 10 Volt	1.2.. 10.8 V
4	mA	0... 20 mA	0.0.. 22.0 mA
5	mA	4... 20 mA	2.4.. 21.6 mA
6	°C	Thermocouple J	-245.25... +1235.5°C
7	°C	Thermocouple K	-249.3... +1411.3°C
8	°C	Thermocouple L	-220.0... +620.00°C
9	°C	Thermocouple N	-32.5... +1332.5°C
10	°C	Thermocouple R	-40.0... +1640.0°C
11	°C	Thermocouple S	-44.0... +1804.0°C
12	°C	Thermocouple T	-215.0... +415.0°C
13	°C	PT100 (2 wires)	-232.3... +882.7°C
14	°C	PT1000	-232.3... +882.7°C
15	Ω	Potentiometer	0... 1.0 MΩ
16	°C	NTC SEMITEC 103AT-2	-56.5... +141.5°C

### Output Type Configuration

Modbus address	Name	Status values	Access
0022	Ch. 01 Analogue Output Config	See the "Output Type Table"	R
...	...	...	R
0025	Ch. 04 Analogue Output Config	...	R

### Output Type Table

Value	Unit	Description	Range
0	V	0... 5 Volt	
1	V	1... 5 Volt	
2	V	0... 10 Volt	0... 100%
3	V	2... 10 Volt	
4	mA	0... 20 mA	
5	mA	4... 20 mA	

### Engineering Unit Indication

Modbus address	Name	Status values	Access
0012	Ch. 01 AI Engineering Unit Config	0 = Celsius; 1 = Kelvin;	R
...	...	2 = Fahrenheit.	R
0015	Ch. 04 AI Engineering Unit Config	...	R

### Special DI Configuration

Modbus address	Name	Status values	Access
0020	Ch. 01 Std/Freq./Counter DI Config	0 = Standard; 1 = Counter.	R
0021	Ch. 02 Std/Freq./Counter DI Config	...	R

## Modbus Map summary

4050	REAL	Ch. 04 Analogue Output – SafeState (sys_file)	R/W

Modbus Coils		
Modbus Coil	Description	Access
1	D01 Digital I/O Status	R/W
...	...	...
15	D16 Digital I/O Status	R/W
...	...	...
16	RL01 Relay Output Command	R/W
...	...	...
19	RL04 Relay Output Command	R/W
...	...	...
20	Reserved	-
...	...	...
31	Reserved	-
32	CH1 Std/Freq./Counter Status	R
33	CH2 Std/Freq./Counter Status	R
34	Reserved	-
...	...	...
47	Reserved	-
48	D01 Digital type (0 = DO, 1 = DI)	R
...	...	...
63	D16 Digital type (0 = DO, 1 = DI)	R
64	D01 Digital Input Mode (0 = DI, 1 = CNT)	R
...	...	...
79	D16 Digital Input Mode (0 = DI, 1 = CNT)	R
80	D01 Counter Overflow	R/W
...	...	...
95	D16 Counter Overflow	R/W
96	CH1 Special Channels Counter Overflow	R/W
97	CH2 Special Channels Counter Overflow	R/W
98	Reserved	-

111	Reserved	-
112... 115	AI Ch. 1 Universal Analogue Input Status	R
116... 119	AI Ch. 2 Universal Analogue Input Status	R
120... 123	AI Ch. 3 Universal Analogue Input Status	R
124... 127	AI Ch. 4 Universal Analogue Input Status	R
128... 131	AI Ch. 5 Universal Analogue Input Status	R
132... 135	AI Ch. 6 Universal Analogue Input Status	R
136... 139	AI Ch. 7 Universal Analogue Input Status	R
140... 143	AI Ch. 8 Universal Analogue Input Status	R
144	E01 System Error Flag	R/W
...	...	...
159	E16 System Error Flag	R/W
160	E01 Operational Error Flags	R/W
...	...	...
175	E16 Operational Error Flags	R/W

### Diagnostic LEDs functions and behaviours

LED	Status	Meaning
PWR	ON	Power Supply present
RUN	ON	Normal CPU or Bootloader operations
RUN	OFF	Bootloader - Work in progress
RUN	Blinking	Configuration session ended
MSG	ON	Normal CPU or Bootloader operations
MSG	OFF	Configuration session in progress
MSG	Reserved	No Errors
USB	ON	USB Host key present
USB	OFF	Wait for PB button to USB files management
USB	Blinking	USB LED while normal CPU or Bootloader operations
COMS	ON	USB Host key present
COMS	OFF	Wait for PB button to USB files management
COMS	Reserved	No Communications
COMS	Blinking	Communication in progress

Note: As the ON/OFF sequence of the LEDs has a specific meaning, it is important that the user recognizes each LED status:

Sequence	Meaning
OFF	The LED is not lit
Steady ON	The LED is lit in a stable way
Blinking	The LED blinks at a frequency of 2.5 Hz (slow)
Single flash	The LED lights once for at least 200 ms
Double flash	The LED lights twice with pulses of 200 ms each
Triple flash	The LED lights three times with pulses of 200 ms each

### Reference documents

The user should refer to the following list of documents:

[1] Modbus.ORG: Modbus Application Protocol Specification V1.1b3, April 2012

### Accessories, Spare Parts and Warranty

Power Supply 75W 24Vdc 3A APS2ALDR75-24

Power Supply 120W 24Vdc 5A APS2ALDR12024

**Warranty: 18 months excluding improper use defects**
